

Brian Douglass

Co-Founder & Solutionologist

Brian is an inventor with extensive experience in precision electro-mechanical system design, diagnostics and repair. He is a detail-oriented product developer and problem solver with the ability to identify unique opportunities for improvements within complex systems. With nearly 15 years of experience, Brian focuses on creating, testing and iterating strategic design solutions.

Contact Brian at briand@dilabs.cc.

Fun Fact About Brian: I worked on the set of Wild Hogs as part of the special effect crew, I have always found myself in the position of problem solving across many industries from Grip and Lighting on movie sets, diagnosing electromechanical devices, to developing new devices from scratch. Finding the innate connections between obscure perspectives has guided me to solve bigger and more challenging problems.

When I'm Not at the Lab, You May Find Brian:

I enjoy cooking so after leaving the lab you will find me spicing an Asian dish or smoking meats to perfection.

Favorite Local Hangout:

Model Citizen; It is a great spot surrounded by great people and beer.

One Thing He Can't Live Without: Technology; I love automation and simplifying daily life by removing the mundane tasks.

What Inspired Brian To Establish DI Labs? The prospect to start the business with Carl was daunting, but I was magnetized to the opportunity to be close with my oldest brother, and to learn and grow in ways I couldn't on my own. This was fueled by my desire to make a sustainable impact on the world around me and to do something bigger than what I could accomplish on my own.
